- Adjustable Width from 86" to 104"
- Heavy-Duty Bearings

SIMPLE, AFFORDABLE, AND LOW MAINTENANCE

Looking for a tarp system for landscape trailer, bumper pull dump trailer, or other utility trailer?

This UT Tarp System is designed to fit virtually all trailers pulled behind a pickup truck.

It is versatile and adjustable to match the right width so you can purchase with peace of mind knowing it will fit your trailer.

The UT Tarp System™ comes with a pre-assembled crank handle for easy use. Its adjustable width ranges from 86 to 104 inches, straight out of the box. If your application is narrower than 86 inches, the roll tube(s) can be cut to fit accordingly.

The UT kit can be bolted or welded directly to the bearing plates found on most trailers and truck bodies, making it simple to install.

This tarp system is designed for straightforward and secure operation and can be used with any tarp materials, such as PVC mesh, Asphalt Lumite, Donoprene, or 18-Oz vinyl. Replacement tarps are available and in stock for convenience.

To cover the load, pull the tarp towards the back of the body and tie the pull rope to the provided brackets. The locking-sprocket crank will secure the tarp in place. To uncover, untie the pull rope and use the crank handle to uncover.

FITS BOXES & TRAILERS - UP TO 23'
